Subject: Notification of Intent to Remove Asbestos During an
Renovation Project.

The Asbestos Abatement Project stated in our previous notification,
(dated 3-24-92) has at this time not yet commenced. A notification will
be re-issued regarding this project as soon as new start and completion
dated have been assigned.

If you have any questions or require further information, please contact
me at (313) 323-0882.

Subject: Notice of Intent to Renovate

Reference: NESHAPS Asbestos Regulations 40 CFR 61

- (1) Name of Owner: Ford Motor Company
Address: World Headquarters
The American Road
Dearborn, Michigan 48121
Building Services Section
Plant Engineering Office
Room 622
- (2) Description of Facility: The Ford World Headquarters Building is a twelve story general office building.
Facility Size: 923,030 square feet
Facility Age : 35 years
- (3) Approximate Amount of Friable Asbestos Material:
 - 300 linear feet of asbestos-insulated pipe (less than 6" diameter)
 - 175 linear feet of fiberglass insulated duct work covered with asbestos-impregnated tape
- (4) The Ford World Headquarters Building, located at The American Road, Dearborn, Michigan, is situated on property bounded by Michigan Avenue, Hubbard Drive, the Southfield Freeway and Mercury Drive.
- (5) Starting Date: It is planned that abatement activities will be conducted in two phases to be completed over a period of two (2) weekends. Phase 1 will commence on Saturday, May 23, 1992 and will be completed by Monday, May 25, 1992. Phase 2 will commence on Saturday, May 30, 1992 and will be completed by Sunday, May 31, 1992. All work will be done during the weekend when building occupancy will be minimal.

(6) Nature of Renovation and Methods:

The approximately 2,100 square feet of existing ceiling tile and all asbestos-containing pipe insulation and duct covering above the ceiling will be removed from the building's Photographic Department located in the basement of the building. The work is being performed on weekends when the number of building occupants will be minimal.

The removal area will be enclosed and isolated from adjacent areas by construction of enclosures consisting of a minimum two layers of polyethylene sheeting. Additional enclosures will be constructed to serve as shower facilities and clean changing rooms for the contractor's employees. Pathways from the work area to the exit area will be enclosed with minimal double layers of polyethylene sheeting. Intersecting corridors will be blocked to prevent entry into work areas by unauthorized personnel.

All HVAC supply and exhaust air will be shut down during removal activities. Negative air machines equipped with HEPA filters will be used to maintain work areas under negative pressure. The asbestos will be thoroughly wetted and stripped from the surfaces to which it is adhered and placed in plastic bags for disposal. All ducts, light fixtures, pipes, and walls in the area will be thoroughly cleaned by a combination of wet wiping and HEPA vacuuming and sealed with a light coat of encapsulant.

Upon completion of each phase of the project, all barriers will be taken down and disposed as asbestos contaminated waste. All waste materials will be stored in a dumpster (specifically designated for asbestos waste only) from where it will be transported to the waste disposal site.

(7) Procedures to be used to comply with the standard:

All work will be performed in accordance with all applicable federal, state and local regulations including:

- 29 CFR 1910.1001 (OSHA) General Industry Standard for Asbestos
- 29 CFR 1910.134 (OSHA) General Industry Standard for Respiratory Protection
- 29 CFR 1910.2 (OSHA) Access to Employee Exposure and Medical Records
- 29 CFR 1910.1200 (OSHA) Hazard Communication
- 29 CFR 1926 (OSHA) Construction Industry
- 49 CFR 61 (EPA) National Emission Standard for Asbestos

Additionally, all work will be done in accordance with the work practices and guidelines detailed in the EPA document Guidance for Controlling Asbestos-Containing materials in Buildings (June, 1985)

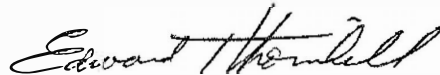

Ford Motor Company's Rouge Construction Services will be the removal contractor. Their mailing address is Construction Services Building, 3001 Miller Road, Dearborn, MI 48121.

Air sampling will be conducted throughout the project and final clearance air monitoring with on-site analysis will be conducted at the completion of removal and decontamination activities. The Contractor will not be released until final clearance air samples indicate airborne concentrations are less than 0.01 fibers/cc.

(8) Name and Location of Disposal Site:

All waste materials will be transported to Wayne Disposal, Inc. Site No. 2, 49350 North Service Drive, Belleville, Michigan. Wayne Disposal's mailing address is P.O. Box 5187, Dearborn, MI 48128.

Sincerely,

Subject: Notification of Intent to Remove Asbestos During an
Emergency Renovation Project.

We are providing information related to the emergency removal of asbestos during renovation at the Power House No.3 located in the Ford Motor Company River Rouge Complex at 3001 Miller Road, Dearborn, Michigan.

Asbestos containing insulation covers a one hundred and fifty foot section of steam pipe line which may obstruct workers during a construction project in the Power House No. 3. The abatement of this pipe line was not anticipated and will better enable workers to construct a negative pressure containment for a much larger abatement project that is scheduled to start February 15, 1992.

If you have any questions or require further information, please contact me at (313) 594-1014.

Subject: Notification of Intent to Remove Asbestos During a
Renovation Project.

We are providing information related to the removal and encapsulation
asbestos during renovation at the Power House # 1 located in the Ford
Motor Company River Rouge Complex at 3001 Miller Road, Dearborn,
Michigan.

If you have any questions or require further information, please contact
me at (313) 594-1014.

11. For Emergency Renovations

Date and hour of emergency: January 13, 1991

Description of the sudden, unexpected event: Asbestos containing material was found during a renovation project. The renovation project was stopped until the asbestos containing material could be removed.

Explanation of how the event caused unsafe conditions or would cause equipment damage or an unreasonable financial burden: Renovation/construction workers were at risk of an asbestos exposure if the project were to continue. However, construction must continue as soon as possible. Therefore, asbestos abatement was scheduled at the earliest possible time.

12. Description of procedures to be followed in the event that unexpected asbestos is found or previously nonfriable asbestos material becomes crumbled, pulverized, or reduced to powder: Bulk samples will be taken and analyzed by an outside laboratory. Work will be stopped until results are obtained.

13. Procedure, including analytical method, if appropriate, used to detect the presence of asbestos material:

Bulk samples are analyzed using polarized light microscopy to determine the presence of asbestos in any suspect material.

14. I certify that an individual trained in the provisions of this regulation (40CFR Part 61, Subpart M) will be on-site during the demolition or renovation and evidence that the required training has been accomplished by this person will be available for inspection during normal business hours. (Required beginning November 20, 1991.)

Description of the sudden, unexpected event: _____

Explanation of how the event caused unsafe conditions or would cause equipment damage or an unreasonable financial burden

12. Description of procedures to be followed in the event that unexpected asbestos is found or previously nonfriable asbestos material becomes crumbled, pulverized, or reduced to powder. Approved asbestos abatement procedures will be followed including bulk sampling, laboratory analysis, abatement, clean up, and air monitoring.

13. Procedure, including analytical method, if appropriate, used to detect the presence of asbestos material:
A recent building asbestos survey identified this material as asbestos containing.
Any questionable material will be re-sampled and analyzed.

14. I certify that an individual trained in the provisions of this regulation (40CFR Part 61, Subpart M) will be on-site during the demolition or renovation and evidence that the required training has been accomplished by this person will be available for inspection during normal business hours. (Required beginning November 20, 1991.)
